

# CEWELD SPA FeAl5

|                    |                                                                                                   |
|--------------------|---------------------------------------------------------------------------------------------------|
| TYPE               | Cored wire for the thermal spray process                                                          |
| ANWENDUNGEN        | Rough surfaces against sliding and or applications that require a smooth finish after machining.  |
| EIGENSCHAFTEN      | Aluminium alloyed tubular wire for electric arc spray on a Fe-Al basis with high bond strength.   |
| KLASSIFIKATION     |                                                                                                   |
| GEEIGNET FÜR       | Coating walking surfaces against sliding, stairs, traction wheels and rollers, buffer layers etc. |
| ZULASSUNGEN        |                                                                                                   |
| SCHWEISSPOSITIONEN |                                                                                                   |

## MECHANISCHE GÜTEWERTE

RÜCKTROCKNUNG      Not required

GAS ACC. EN ISO 14175
