

CEWELD 253 MA Tig

TYPE CEWELD 253 MA Tig is designed for welding austenitic chromium-nickel steels such as 253MA

ANWENDUNGEN For use in high temperature furnaces, combustion chambers, burners etc Not suitable for applications exposed to wet corrosion. Prior to welding, it is recommended to carefully brush or ground black plates and previous weld beads.

EIGENSCHAFTEN Cerium combined with silicon improves the oxidation resistance and erosion-corrosion resistance in oxidizing and neutral environments, whereas the nitrogen allows superior strength at high temperatures. Therefore, this filler wire shows excellent resistance to high temperatures (most suitable temperature range is 850 - 1100 °C), high creep strength, very good resistance to isothermal and, particularly, cyclic oxidation.

KLASSIFIKATION EN ISO 14343-A: W 21 10 N
W.Nr. 1.4835
