

# CEWELD SP 95/5 (NiAl)

**TYPE** SP 95/5 is a Nickel-Aluminum based alloy for use as a bonding layer with the thermal spray process

**APPLICATIONS** New coatings on machine parts and shafts to increase life, rebuilding wornout parts etc. Layer thickness: approximately 0.1- 0.15 mm.

**PROPRIÉTÉS** This alloy offers the highest bonding properties available for both the Flame spray process as the Arc Spray process. The wire has a high polished and clean surface to assure the best feeding and thermal spray properties. Sprayed layers of this material are-resistant to variation in high temperatures and are used as a buffer layer for all other spraying alloys. Hardness, coating macro: approximately HRc 22. Maximum working temperature: approximately 850 °C

**CLASSIFICATION** EN ISO 14919: 6.5

**CONVIENT POUR** Shafts, Clutches, Gliding surfaces, Valves, Bond coatings etc.

**AGRÉMENTS**

**POSITIONS DE SOUDAGE**

**ANALYSE CHIMIQUE  
TYPIQUE DU MÉTAL  
D'APPORT (%)**

Si	Mn	Ti	Fe	Al	Ni
