| TYPE                                                 | Solid nickel based wire for Alloy 699 types (2.4842)                                                                                                                                                                                                                 |                            |     |    |      |     |     |     |    |       |  |
| APPLICATIONS                                         | Chemical process industry                                                                                                                                                                                                                                            |                            |     |    |      |     |     |     |    |       |  |
| PROPRIÉTÉS                                           | NiCro 603 is an alloy especially developed for high-temperature applications. Because of the high high chromium and aluminum content it has excelent metal dusting corrosion and oxidation resistance. Due to its excellent corrosion resistance.                    |                            |     |    |      |     |     |     |    |       |  |
| CLASSIFICATION                                       | AWS                                                                                                                                                                                                                                                                  | A 5.14: ~ERNiCrFe-Al-1     |     |    |      |     |     |     |    |       |  |
